

Why Migrations Fail

Without a centralized strategy, organizations lose track of their infrastructure. Here is how we bridge the gap.

Misaligned Architecture

When architecture is designed in silos, infrastructure loses efficiency. **40% of cloud spend is wasted** due to oversized resources.

Lack of Scalability

Legacy systems cause friction during peak loads. Unplanned downtime costs enterprises an average of **\$300,000 per hour**.

The Solution

Our experts ensure your architecture is purpose-built with real-time cost observability, automated security checks, and multi-region high availability.

CLOUD SERVICE

B2B Enterprise Cloud Excellence

Migrate. Scale. Secure. Optimize.

Empower your enterprise with the infrastructure it needs to succeed. Achieve global scale through robust and resilient cloud architecture.

GKS Infotech Pvt Ltd

CLOUD SERVICE

Enabling Smart, Secure,
& Scalable Journeys

Modernize legacy infrastructure with precision. We deliver enterprise-grade performance through human-centric design and automated efficiency for the world's most demanding sectors.

TRUSTED BY FORTUNE 500
PARTNERS

Organic Deployment

We don't just migrate data; we evolve ecosystems through a meticulously refined 5-step growth strategy designed for lasting impact.

1. Audit & Assess: Deep dive into current tech debt and cloud readiness.

2. Recommend: Tailored multi-cloud solutions for optimal ROI.

3. Implement: Zero-downtime execution with strict governance.

4. Monitor: 24/7 proactive threat detection and observability.

5. Optimize: Continuous education and cost management.

Specialized Modules

A modular suite designed for high-availability enterprise environments, ensuring flexibility across any stack.

Migration & Hybrid Cloud

Seamless transition from legacy on-premise to distributed hybrid environments with zero friction. Includes Live Migration, Hybrid Mesh, and Infrastructure as Code.

Kubernetes Mgmt

Automated container orchestration and scaling, equipped with service mesh security via Istio & Envoy.

Public & Private

Expert management of AWS, Azure, GCP, and dedicated private bare-metal solutions.

XaaS & DRaaS

XaaS Management

Integrated control plane for IaaS, PaaS, and SaaS licensing and robust cost optimization algorithms.

Backup & DRaaS

Automated backup with multi-layer versioning and compliance-driven SOC2 & HIPAA security standards.

Transparent Governance

Data-driven performance monitoring based on exact telemetry, ensuring strict adherence to compliance standards across global regions.
